

Uber Ride Booking Analysis Dashboard

Objective

- To analyse Uber ride booking data using Microsoft Excel.
- To understand booking patterns, vehicle demand, revenue and cancellations.
- To analyse pickup locations, ride distance and customer/driver ratings.
- To create an interactive dashboard for easy data visualization and decision-making.

Data Used

Source	Kaggle
Dataset	Uber Ride Booking Dataset
Total Records	150,000
Total Columns	21
Key Fields	Booking ID, Booking Status, Vehicle Type, Pickup Location, Booking Value, Ride Distance, Payment Method, Driver Ratings, Customer Rating

Tools and Techniques

- Microsoft Excel 2016
- Data cleaning and preprocessing
- Excel Table
- Excel formulas: COUNTA, SUM and COUNTIF
- PivotTables and PivotCharts
- Slicers and Date Timeline
- Top 10 filtering
- Data labels and number formatting

Key Features

Interactive Excel dashboard built with PivotTables, PivotCharts and slicers, highlighting the following core metrics:

- Booking status analysis (Completed, Cancelled, Incomplete, No Driver Found)
- Vehicle-wise booking and revenue analysis
- Top 10 pickup location analysis
- Average ride distance analysis by vehicle type
- Driver and customer rating analysis
- Interactive filtering using Vehicle Type, Booking Status, Payment Method and Date Timeline

Key Findings

- 150,000 Uber bookings were analysed in total.
- 93,000 bookings were completed, giving a 62% completion rate.
- 27,000 bookings were cancelled by drivers.
- 10,500 bookings were cancelled by customers.
- 10,500 bookings had no driver found.
- The overall cancellation rate was 25%.
- Booking volume and revenue vary considerably across different vehicle types.
- Certain pickup locations show noticeably higher booking volumes than others.
- Average driver and customer ratings vary slightly across different vehicle types.

DASHBOARD SNAPSHOT — BOOKING STATUS & VEHICLE-WISE BOOKINGS

Outcome / Value

- Provides a clear and interactive view of Uber ride booking performance.
- Helps identify important booking and cancellation patterns.
- Helps compare vehicle-wise demand and revenue.
- Helps identify high-volume pickup locations.
- Provides an overview of ride distance and rating performance.
- Supports better operational planning, driver allocation and service improvement through data-driven insights.

This project demonstrates how Microsoft Excel can be used to transform raw operational data into a clear, interactive dashboard that supports data-driven decision-making for ride-hailing operations.
